

Empowering organizations to create a sustainable future.

From company to community,
we bridge the energy gaps.

Who We Are

**We design, build, and operate our projects.
Keeping capital and operational stressors
off our partners so they can keep doing
what they do best.**

3 Rivers Energy Partners is a renewable energy company specializing in the creation of renewable natural gas (RNG) from waste. Our experience managing all aspects of project ownership and extensive network of partners within the energy sector give us an undeniable edge.

Three points to always keep in mind when developing at project for your facility

- 1) Sustainability means both environmental and financial.
 - A positive environmental project that doesn't have a positive financial impact is not **sustainable**! Stay focus on projects that do both.
- 2) A project that removes one problem but creates another problem someplace else or simply just moves a problem is not a **solution**!
- 3) Throughout the project development stay focused on the problem you are fixing!

Jack Daniel Distillery

This project is projected to

- Produce up to **1,000,000 mmbtu of RNG**
- Produce **liquid fertilizer** for about **43,400 acres** of farmland
- Reduce natural gas usage by **16%**
- Reduce production constraints

Booker Noe Distillery

This project is projected to

- Produce up to **1,300,000 mmbtu of RNG**
- Produce **liquid fertilizer** for about **33,000 acres** of farmland
- Reduce greenhouse gas emissions by up to **63%**
- Enhance soil health and create rural economic development opportunities

Current Projects

Developing the solution for your problem starts with identification.

Distilleries have a different set of problems to solve than ethanol facilities so solutions will be different.

Identifying the Problems

- Not enough natural gas to grow or sustain production.
- Getting rid of stillage is too expensive or not able to rely on the offtake in the future.
- Need to reduce the Carbon Intensity (CI) score.
- Cost to handle or dry the distillers grains becoming too expensive and/or unpredictable because of cost or location.
- Logistical restriction in handling the distillers grains.
- Our company (Sustainability Director) publicly announced aggressive Carbon footprint goals without consulting with you first.
- Create revenue for profits. "warning"

THANK YOU
